Deadline: 09-01-2023, 23:59

Exercise no. 3 and 4

All of you have a wonderful resumes, congratulations!

Now, all contents in yours resumes needs to be editable, so you need to create a backoffice to manage it.

This backoffice needs to have authorization and 2 types of users:

- Admin – access to all;

- Manager – only access to manage your contact requests or whatever you want him to have access to.

Must be possible to create / read / update / delete yours:

- Images and texts (about-me), etc…;
- Contacts:
    - Phone number, email, Github, LinkdIn, etc…).
- Laguages:
    - Description and level.
- Skills:
    - Description and level.
- Educations:
    - Description, school and logo, start at, end at or in progress, etc…).
- Certifications;
    - Description, certifier and logo, start at, end at or in progress, etc…).
- Projects:
    - Description, start at, end or inprogess, etc…).

In your resume you have a contact form, so, you need to create a feature that:

- Reply;

- Mark read / unread;

- Etc…;

As bonus, you can add statistics in your page like:

- How many distinct visitors you did have;

- What are the most visited sections;

- Accessed by device type (mobile phone, tablet, etc…);

As bonus you must bem resize images and the page needs to load asap.

Here you have a database tip.

Fig 1 - Database tip

Its mandatory use php and mysql.

Its mandatory to deploy in 00webhost or another provider.

Good luck,

António José Viana
